No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                      1 atgtcatggtttagtggcct.......aagggaccaaggtgggcact 3552

The present invention relates to methods and compositions for enhancing cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-ASP) adenylytcyclases (also referred as adenylcyclase, adenylate cyclase and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially congestive heart failure. The present DNA sequence encodes human cardiac adenylcyclase VI (ACVI) isoform which is used for generating a fourth beta-ASP transgene, used in the exemplification
                                                                                                                                                                          Novel polynucleotide encoding a modified adenylylcyclase polypeptide useful for enhancing cardiac function in mammalian hearts, and for treating heart disease, especially congestive heart failure -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ð
                                                                                               ਠੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to enhancing cardiac function in a mammal, convolves delivering a vector to the heart of the mammal, where the involves delivering a vector to the heart of the mammal, where the vector comprises a gene encoding a beta-darenergic signaling protein (beta-ASP) e.g. ademylylcyclase isoform 6 (AC-VI) operably linked to a replication-defective viral particle involves introducing first and second plasmids into a replication-center of involves introducing first and second plasmids into a replication competence, where the first plasmid comprises a replication competence, where the first plasmid comprises a conferring replication-defective human ademovirus genome, and the second plasmid comprises a replication-defective human ademovirus genome and further comprises a replication-defective human ademovirus genome and further comprises a replication-defective human ademovirus genome and further comprises an additional polynucleotide sequence making the second plasmid too large to be encapsidated in an ademovirus particle, where creambination takes place between the first plasmid and the second plasmid to generate a recombinant genome is sufficiently small to be encapsidated in an ademovirus particle, identifying successful recombinant viral vectors of an ademovirus particle, identifying successful recombinant viral particle in replication genes to generate a recombinant replication defective viral particle. The method is useful for enhancing cardiac denoviral replication genes to generate a recombinant sequence is a cDNA encoding human Ademylylcyclase to generate a recombinant sequence is a cDNA encoding human Ademylylcyclase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This DNA sequence encodes human type VI adenylyl cyclase (hAC6, see AAW13659) that is expressed mainly in the heart and brain. hAC6 has a similar putative structure to other adenylyl cyclase isoforms but, like type V, is distinguishable in that it has a larger but, like type V, is distinguishable in that it has a larger region. hAC6 cDNA was initially isolated from a human heart DNA library using an adenylyl cyclase PCR fragment as probe. It was library using an adenylyl cyclase PCR fragment as probe. It was used to design primers that were used in a PCR-based RACE to obtain library using an adenylyl cyclase PCR fragment as probe. It was used to design primers that were used in a PCR-based RACE to obtain the full-length CDNA sequence. The invention relates to the hAC6 gene, methods for the recombinant production of purified hAC6 and the proteins made by these methods, antibodies against hAC6, vectors, probes and host cells (especially HEK-293) transformed by genes encoding polypeptides having hAC6 activity, along with diagnostic and therapeutic uses for these various reagents. hAC6 can be used as a tool to screen for agonists and antagonists that stimulating diseases caused by aberrant activity of this enzyme, and diseases whose symptoms can be ameliorated by stimulating or

                                 enhancing
                           The present invention relates to methods and compositions for enhancin cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adenylylocylases (also referred as adenylocylases, adenylate cyclase and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially cardiac adenylocylase VI (ACVI) isoform which is used for generating a third beta-ASP transgene, used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CAGCGGTACTTTTTCCAGATGAACCAGAGCAGCCTGACGCTGCTGGTGGTGGTGCTGGTG

The invention relates to enhancing cardiac function in a mammal, involves delivering a vector to the heart of the mammal, where the involves delivering a vector to the heart of the mammal, where the vector comprises a gene encoding a beta-adenergic signalling protein (beta-ASP) e.g. adamylylcyclase isoforms (AR-VI) operably linked to a promoter or involves introducing first and second plasmids into a replication-cell expressing one or more adenovirus genes conferring replication competence, where the first plasmid comprises a ceplication-proficient human adenovirus genome and comprises a replication-proficient human adenovirus genome and plasmid comprises a replication-proficient human adenovirus genome and comprises a replication-broficient human adenovirus genome and plasmid to large to be encapsidated in an adenovirus particle, where rescombination takes place between the first plasmid and the second plasmid to generate a recombinant adenoviral genome comprising the gene encoding a beta-ASP but lacking one or more adenoviral replication genes, where the recombinant genome is sufficiently small to be encapsidated in an adenoviral replication genes, concoling a resulting recombinant viral vectors in cell culture, and propagating a resulting recombinant viral particle in replication-permissive mammalian cells expressing the missing cadenoviral replication genes to generate a recombinant replication-defined in mammal, preferably human and is specifically useful for the propagation as congestive heart failure (FHF).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   81
                                                                                                                                                                                            failure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to methods and compositions for enhancing cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsiveness within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-AR), adennylycyclases (also referred as adenylcyclase, adenylate cyclase and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASP is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially congestive heart failure. The present cDNA sequence encodes human modified cardiac adenylcyclase VI (GVVI) isoform which is used for generating a beta-ASP transgene, used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   22 ATGTCATGGTTTAGTGGCCTCCTGGTCCCTAAAGTGGATGAACGGAAAACAGCCTGGGGT

The invention relates to enhancing cardiac function in a mammal, involves delivering a vector to the heart of the mammal, where the vector comprises a gene encoding a beta-adrenergic signalling protein (beta-ASP) e.g. adenylylcyclase isoform 6 (AC-VI) operably linked to a promoter. Generating a recombinant replication-defective viral particle involves introducing first and second plasmids into a replication-permissive mammalian cell expressing one or more adenovirus genes
                                                                                                                                                                                                                                                                                                                                                                                                                 Human; 88; gene; adenylylcyclase isoform 6; AC-VI; CHF; gene therapy; beta-adrenergic signalling protein; congestive heart failure; cardiant; cardiac function; adenovirus vector; transgenic; gene therapy; mouse; beta-adrenergic signalling protein; beta-ASP; heart disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Enhancing cardiac function in a mammal for treating heart disease such as congestive heart failure, by delivering to the heart of the mammal sector comprising a gene encoding a beta-adrenergic signalling protein

conferring replication competence, where the first plasmid comprises a gene encoding a beta-ASP operably linked to a promoter and further comprises a replication-defective human adenovirus genome, and the second plasmid comprises a replication-proficient human adenovirus genome and further comprises an additional polymucleotide sequence making the second plasmid too large to be encapsidated in an adenovirus particle, where rescue recombination takes place between the first plasmid and the second plasmid too large to be encapsidated in an adenovirus particle, where recombination takes place between the first plasmid and the second plasmid too generate a recombinant genome is sufficiently small to be encapsidated in an adenovirus particle, identifying successful recombinant viral vectors in cell culture, and propagating a resulting recombinant viral particle in replication-permissive mammalian cells expressing the missing adenoviral replication genes to generate a recombinant replication-defective viral particle. The method is useful for enhancing cardiac function in a mammal, preferably human and is specifically useful for treating heart diseases such as congestive heart failure (CHF).

The present sequence is a chimaeric CDNA encoding human/mouse 888888888888888888888888888

                                                                                                                                                                                                                        A canine heart cDNA library was constructed in lambda gt10 and was screened with a 970 bp Aatl-Hincil fragment from type I adenylyl cyclase toylase cDNA probe (encodes the first cyroplasmic domain of adenylyl cyclase, which has significant homology to other previously known types of adenylyl cyclase). One positive clone, of 5.4 kb was obtd. Positive colonies were subcloned into puclas and further subcloned and sequenced bidirectionally. The 5.4 kb clone was used to rescreen the library and on averlapping clone contg. the 5' end of the gene was isolated. Together the two clones cover the complete canine cardiac adenylyl cyclase gene. The gene is suspected of being involved in the regulation of cardiac function and it is thought that decreased activity of adenylyl cyclase in the heart may be a major factor in the development of heart failure. Thus the adenylyl cyclase gene is useful to screen cpds. which stimulate the activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                           The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a genes (I) in a test sample conditions the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (AB199202 to AB19912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes are used as an indicator when screening for ischaemic condition-improving represent PCR primers for a mouse ischaemic condition-improving represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A recombinant Adenylyl cyclase is described winton lacks measured bound domains. Separation and purification of the recombinant enzyme is much easier compared with wild type enzymes and the enzyme is more stable than the wild type enzyme which combinant enzyme is more stable than the wild type enzyme which allows easier screening of compounds that stimulate and inhibit Adenylyl cyclase activity. The recombinant adenylyl cyclase comprises a chimera of adenylyl cyclase (1 and C2 domains linked covalently. CY a chimera of adenylyl cyclase is useful for screening inhibitors and stimulators of adenylyl cyclase activity. Inhibitors of the enzyme are useful for treating cholers, pituitary tumors, heart failure, ischaemia, cyclase are useful for creating pseudohypoparathyroidism and other cyclase are useful for treating pseudohypoparathyroidism and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     э;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          172

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to methods and compositions for enhancing cardiac function in mammalian hearts by inserting transgenes encoding beta-adrenergic signalling proteins (beta-ASP) which increase beta-adrenergic responsivenes within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic receptors (beta-ASPs of the invention include beta-adrenergic adenylate cyclases within the myocardium using in vivo gene therapy. The beta-ASPs of the invention include beta-adrenergic adenylate cyclases and cAMP synthetase) and G-protein receptor kinase (GRK) inhibitors. The beta-ASPs is used for enhancing cardiac function in mammalian hearts and for treating heart disease, especially partial cardiac adenylcyclase VI (ACVI) isoform which is used for generating a third beta-ASP transgene, used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel polynucleotide encoding a modified adenylylcyclase polypeptide useful for enhancing cardiac function in mammalian hearts, and for treating heart disease, especially congestive heart failure -

The invention relates to enhancing cardiac function in a mammal, involves delivering a vector to the heart of the mammal, where the vector comprises a gene encoding a beta-adenergic signalling protein (beta-ASP) e.g. ademylylcyclase isoform 6 (AC-VI) operably linked to a promoter. Generating a recombinant replication-defective viral particle involves introducing first and second plasmids into a replication-comprises a repulsation competence, where the first plasmid comprises a conferring replication-defective human adenovirus genemal and beta-ASP operably linked to a promoter and further comprises a replication-proficient human adenovirus genome and further blasmid too large to be encapsidated in an adenovirus particle, where plasmid to generate a recombinant adenovirus particle, where concoding a beta-ASP but lacking one or more adenoviral replication genes, where the recombinant genome is sufficiently small to be encapsidated in an adenovirus particle, identifying successful recombinant viral particle in replication-profice encoding a resulting recombinant viral particle in replication propagating a resulting recombinant viral particle in replication processing the missing the missing in replication and propagating a resulting recombinant viral particle in replication and propagating a resulting recombinant viral particle in replication and propagating a resulting recombinant viral particle in replication and propagating a resulting recombinant viral particle in addition and propagating a resulting recombinant viral particle in a sufficiently small continuation and propagating a resulting recombinant viral particle in a sufficiently small continuation and particle in the propagating a resulting replication particle in a second par
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Enhancing cardiac function in a mammal for treating heart disease such as congestive heart failure, by delivering to the heart of the mammal sector comprising a gene encoding a beta-adrenergic signalling protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    636 TTACGTGGTGCTGGGCATCCTGGCGGCAGTGCAGGTCGGGGGGCGCTCTCGCAGCAGCACCC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3 TAACGTGGTGCTGGGCATCCTGGCGGCAGTGCAGGTCGGGGGCGCTTTCGCAGCAGCAGCCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     원
                                                                                                                                                                                                                  The present sequence encodes human adenylylcyclase isoform VI (AC-VI) from the present invention. The present invention describes a recombinant replication-defective viral particle (I) comprising a gene encoding a beta-adrenezjes signalling protein (beta-ASP) operably linked to a promoter. Also described are: (I) a recombinant pro-viral plasmid (Ia) comprising a gene encoding a beta-ASP, as above, operably linked to a promoter and further comprising a replication-defective viral genome; (2) a (mammalian) cell transfected with (I) or (Ia); (3) an isolated polymucleotide comprising a sequence encoding a human adentylylcyclase isoform VI (AC-VI), or a variant having AC activity; (4) a human AC-VI encoded by (3); (5) an isolated polymucleotide sequence which hybridises at high stringency to (3); and (6) a vector comprising the polymucleotide of (3). (I) can be used to form a filtered adenovirus particle preparation. (I) is used to enhance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GCATGAGAATCGGCAGCAGGAGCGGCTGCTGCTGTCGGTATTGCCCCAGCACGTTGCCAT 1055

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence encodes the human type V ademylyl cyclase (hACS) of the invention. hACS has a similar putative structure to other adenylyl cyclase isoforms but, like type VI, is distinguishable in that it has a larger N-terminus and a relatively shorter C-terminus as it lacks the care in the hACS polypeptides are useful in assays that screen for potential therapeutic agents, which modulate hACS activity. These polypeptides are also useful in assays for the diagnosis of diseases and disorders. Agonists of hACS are useful control agents in such assays, and they may have useful effects in vivo for treating disease. Antibodies crining diseases caused by abnormal hACS activity (e.g. In the heart and treating diseases caused by abnormal hACS activity (e.g. In the heart and treatin), and in diseases, which are alleviated by modulating hACS activity. The oligonucleotides are useful in methods that inhibit or regulate hACS expression in vivo and in vitro. The cloning of the human

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

S Katsushika, S., Chen, L., Kawabe, J., Nilakantan, R., Halnon, N.J.,

Homcy, C.J. and Ishikawa, Y.

Cloning and characterization of a sixth adenylyl cyclase isoform:

types V and VI constitute a subgroup within the mammalian adenylyl

cyclase family
